Key Facts

Fund Objective
To source and actively manage a portfolio of fixed interest credit assets with a core focus on structured credit. Targeted portfolio construction is to hold assets with a shorter credit duration to limit capital movements during periods of market volatility.

Monthly Commentary

MHYF returned 0.13% (net) in October. The 6 month net return was 3.51% and the 12 month net return was 6.46% at the end of October. Over the past 12 months the fund has returned 2.32% above the Ausbond Bank Bill Index, versus a target of 4.50%.

With no RBA meeting in October, the market focus was on domestic economic data. September employment figures showed a fall of 39,300 versus a 20,000 gain expected. The unemployment rate rose to 4.7%, above the RBA's 4.5% forecast for December. Following the data, the market briefly priced almost no chance of a November rate hike. But inflation refused to cooperate. September CPI rose to +4.3% YoY against +4.2% expected, and for the quarter headline prices rose +1.3% QoQ while the trimmed mean lifted to +3.7% YoY, +10 bps versus consensus. This left the RBA with little choice, and at the November meeting the board decided 6 votes to 3 to lift the cash rate for the 5th time this year to 4.85%.

The December meeting is not considered live now the RBA have delivered consecutive hikes. At the press conference, Governor Bullock highlighted the 3 votes to hold were looking for more information. Bullock described now as a good place to "take stock" and see if the data shows "we are travelling more or less in line with the forecasts". The market still has some chance of another hike priced in, around 30% probability by March 2027.

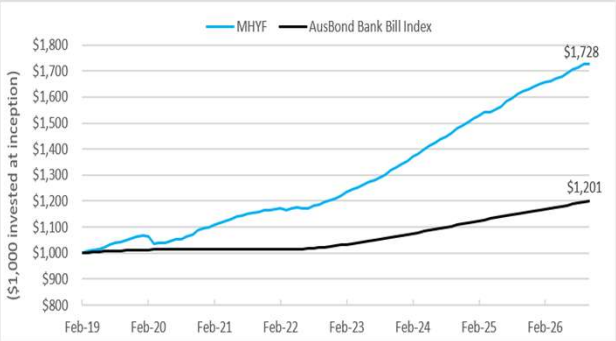

Credit spreads drifted wider through October, more on the expectation of new issuance post the US mid terms and major bank reporting period, both due in the first week of November. 5 year major bank senior has settled around +70bps, a few bps above the ANZ print in August that priced at +66bps.

In securitisation, the weight of supply finally broke investors appetite, particularly for mezzanine notes. The October issuance across 21 deals added A$13bn+ of volume to the 2026 total, on top of A$17.5bn issued in September. Spreads were wider across the capital stack, up to +18bps in senior and +30-40bps in sub-investment grade mezzanine. For context, S&P B rated non-conforming RMBS priced at +390a in September. Deals priced in a +420bps to +460bps range in October. The pipeline of new deals is slowing, which we expect will support credit spreads at current wider levels.

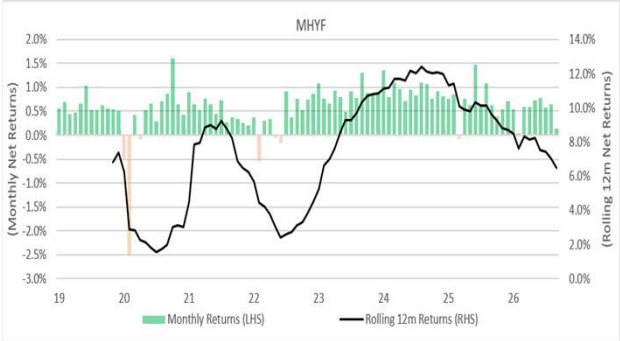

Fundamentals remain sound for RMBS, though house prices continue to fall. Nationally, house prices fell -3.9% over three months to be down -2.8% over the past 12-months. The RBA's Financial Stability Review estimates fewer than 1% of borrowers are in negative equity, and that even a further 20% fall would take only around 5% into negative equity - fewer still in securitised pools, which hold less high-LVR loans. S&P's August (latest) data show prime arrears steady at 0.86% (excluding a large portfolio sale) and non-conforming improving to 3.51% from 3.61% a month earlier. The long run average is 7.90%.

Higher short-term interest rates helped lift the running yield on the portfolio in October. While credit spreads were modestly wider in October which detracted from income, we think the credit spread widening has largely run its course so income should drive returns into year end.
